                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a thionine gene from Nicotiana paniculata derived NpTHI. The thionine protein has an effect improving the salt stress resistance of a plant. The gene can the salt stress resistance of a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Thionine gene derived stress to plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 1999-038278/04

Nicotiana

```
The present sequence represents a thionine gene from Nicotiana excelsior derived NeTHII. The thionine protein has an effect of improving the salt stress resistance of a plant. The gene can improve the salt stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 456 BP; 149 A; 73 C; 88 G; 146 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Thionine gene derived by salt stress - used to deliver improved stress to plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nicotiana excelsior; Nicotiana paniculata; thionine; NeTHI1; NeTHI2; NpTHI1; salt stress; resistance; ds.

                                                                                                                                                                                                                                                                                                               The tomato-derived transcriptional initiation region which regulates the expression of the sequence corresp. to the p2130 clone is considered ovary-specific. Sequences hybridisable to the p2130 clone, e.g. probe p27, show abundant mRNA, esp. at the early stages of anthesis. The message is expressed in ovary integument and ovary outer pericarp tissue and is not expressed, or at least not readily detectable, in other tissues or at any other stage of fruit development. The native function of the amino acid sequence encoded by the structural gene comprising p2130 is unknown.

                 The sequence given shows the DNA sequence of cDNA clone p2130. This sequence is expressed during the early stages of anthesis in tomatos. The message is expressed in ovary integumen and ovary ovary over pericarp tissue. It is not readily detectable in other tissues or at other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cDNA; clone pZ130; anthesis; tomato; ovary; integumen; outer pericarp; fruit; developememt; transcription; initiation; region; modulation; ovary-specific; endogenous; fruit product; exogenous; phenotype; ds.

The actual function of the pZ130 polypeptide is unknown. The transcription initiation region can be used for modulation of endogenous fruit products, for production of exogenous products and for modification of the phenotype of fruit and fruit products. It was isolated by screening a library prepd. from cDNA of pre-anthesis stage ovaries with probes made from pre-anthesis manner. The insert was used to isolate the corresponding genomic clone (AAT31824). The p2130 transcriptional initiation region is considered to be ovary-specific. It can be utilised in DNA constructs for the expression of heterologous genes, partic. in early fruit development, and esp. for expression of a melanin synthesis gene in transgenic cotton. The native function of the p2130 gene product (AAR97559) is unknown. (Updated on 25-WAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA construct for expressing melanin synthesis gene in plant ovule cells - contains promoter from the tomato pZ130 gene, also binary vector and transgenic plants, esp. cotton, contg. construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 3; Fig 1A-B;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Martineau BM,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  19-JUL-1989;

It can also be used as a molecular probe. To obtain pZ130, a tomato pre-anthesis stage cDNA library was screened by differential hybridisation. Clones pZ7 and pZ8 that hybridised only to pre-anthesis probes were used to screen a second cDNA library, yielding pZ130 and pZ70 (see also AAT48814). A genomic clone (AAT48816) was also isolated using pZ130 as probe.
                                                                                                                                                                                                                                                                                                                                                                                           Sequence 564 BP; 188 A; 80 C; 107 G; 189 T; 0 other;
